

CLINICAL DISCHARGE REPORT - EMERGENCY DEPARTMENT

Hospital Universitario La Paz - SERMAS

Discharge date: 23/01/2026 08:30 h

Patient: Martinez Lopez, Carlos | CIP: 2800001234 | Age: 59

DISCHARGE DIAGNOSIS

- Decompensated stable angina. NSTEMI with necrosis ruled out.
- Arterial hypertension (max BP 158/94 mmHg during observation).
- Type 2 diabetes mellitus.

CLINICAL SUMMARY

Admitted to emergency observation on 22/01/2026 for oppressive chest pain.

Serial troponins: no criteria for myocardial necrosis. ECG: no acute ischaemic changes. Chest X-ray: no acute findings. 22 hours of continuous monitoring. Favourable clinical course.

DISCHARGE TREATMENT

1. Losartan 50 mg - 1 tablet at night.
2. Metformin 850 mg - 1 tablet with breakfast and dinner.
3. Atorvastatin 40 mg - 1 tablet at night.
4. Aspirin 100 mg - 1 tablet in the morning (added during this admission).
5. Sublingual nitroglycerin 0.4 mg - rescue if chest pain.

RECOMMENDATIONS

Low-sodium diet. Glycaemic control. Relative rest. Cardiology appointment on 10/03/2026. Return to ED if: chest pain at rest > 15 min.
